

LITERATURE REVIEW

P.Thanapal et.al [2015] have proposed an Android Application that provides provisions to add some information about what income comes from other persons and what are all the expenses or payments we have to pay on a specific date or month.

Angad Manchanda et.al [2016] have proposed that the Expense Tracker Mobile Application was developed for iPhone users to keep track of their expenses and determine whether they are spending as per their set budget.

Atiyaz Kazi et.al [2015] have proposed an Android Application that tracks the daily expenses of the user. This app is like digital record keeping which keeps the records of expenses done by a user. The application keeps track of the Income and Expenses of both users on a day-to-day basis.

Nidhi Jitendra Jadhav et.al [2022] have proposed that an expense tracker is a tool that can assist anyone in keeping track of their expenses and reducing their spending. Expense Tracker is a mobile application that users may download to their phones and use to track and update their daily costs so they are always aware of how much they are spending

Nuura Najati Binti Mustafa et.al [2021] have proposed Daily Expense Tracker Mobile Application is an application meant for all type of people concerned and cautious about their daily expenses. With the help of this application, users will be able to more careful of their spendings and save more. Also, this application is an easier alternative to keeping track of users' use of money than the traditional way of writing their expenses in their diary

A Velmurugan et.al [2020] have proposed The Expense Manager is a multi-purpose finance related android application intended to run on android devices. The android application can be run on all android devices above android version 5.0. It is designed efficiently to give you the best suggestions for finance planning

Ashaha Walal et.al [2021] have proposed An android app which users can execute on their mobile phones and update their daily expenses so that they are well known to their expenses. Here users can define their own categories for expense type like food, clothing, rent and bills where they have to enter the money that has been spent and also can add some information in additional information to specify the expense.

Chunye Gong et.al [2010] This paper tries to summarize general characteristics of cloud computing which will help the development and adoption of this rapidly evolving technology. The service oriented conceptional characteristic abstracts the details of inner implementations. As a technical characteristic, the loose coupling is the key technical feature of all kinds of cloud computing systems. select category of expense, enter other information like user can capture photo, add location, select amount of expense etc

Proposed Work:

In this assignment the first thing we are focusing is on the front-end part which includes creating and designing the user's page that allows them to login and register using their credentials. The next thing that we have planned is creating the database and then we are connecting the database with the frontend part using flask. The techstack we are using here are HTML,CSS,JAVASCRIPT. The backend that we are using here is python.
